

FUEL CELL CAR SCIENCE KIT

JUST ADD WATER!

This hydrogen fuel cell car kit is conveniently designed to bring the latest research out of the laboratories, so that you too can join the global scientific community in bringing the world into the Hydrogen Age!

NEW packaging!

Around the world, scientists and researchers are looking to find new ways to meet our growing energy needs without further damaging our environment or endangering our planet.

One alternative is hydrogen, which can be created using clean, renewable sources such as wind and solar power.

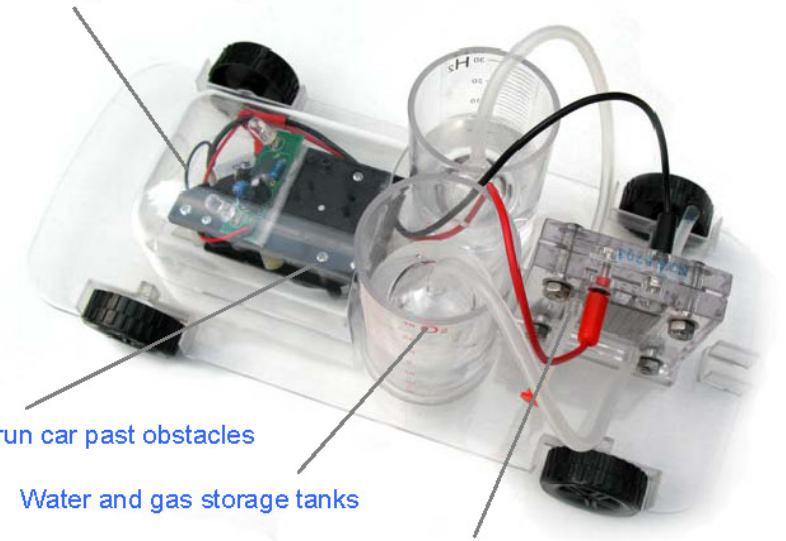

Using a device called an electrolyzer, water can be used to form hydrogen. Fuel cells can then convert hydrogen to electrical energy to power anything from vehicles and homes to electronic devices!

Flashing blue LED lights

Motor can run car past obstacles

Water and gas storage tanks

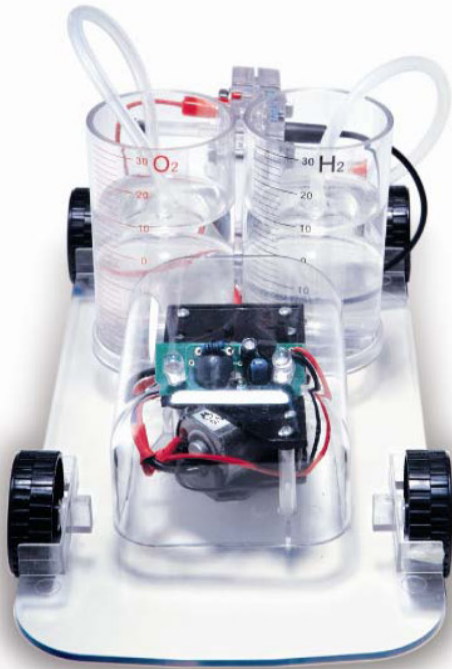

Reversible PEM fuel cell & Electrolyzer

The Fuel Cell Car Science Kit comes with an instruction manual and is recommended for all ages above 12.

Once in operation, it drives automatically past all obstacles!

FUEL CELL CAR SCIENCE KIT

FUEL CELL CAR SCIENCE KIT

JUST ADD WATER!

Drives around obstacles by itself!
